PowerSmart by Emporia

Avoid a $3,000–$8,000 electrical panel upgrade and still get the fastest possible EV charging. **PowerSmart makes it happen seamlessly**.

Skip the $3,000–$8,000 Panel Upgrade

Most homes don't have panel space for a Level 2 charger. PowerSmart is the certified alternative for $199.

Always Charges at Maximum Safe Speed

PowerSmart automatically balances your home's power, so your EV always gets the most charge possible.

Protects Your Home's Electrical System

Monitors your panel 3,000x per second and automatically prevents overloads. No tripped breakers. Ever.

Nationally Certified & Code-Compliant

PowerSmart is UL-certified and accepted under the National Electric Code (NEC) as an alternative to a panel upgrade.

Installed at the Same Time as Your Charger

One electrician visit. Your EV charger and included Vue Energy Monitor are installed at the same time.

Works Quietly in the Background

Once it's set up, there's nothing to manage. Plug in your car and wake up to a full charge, every time.

"Most homes need a $5,000+ panel upgrade for Level 2 charging. PowerSmart fixes that. It watches your power in real time and keeps your EV at full speed without pushing your panel past its limit. One device. $199. Thousands saved."
